Important information and risk warnings

*The ongoing cost figure represents the cost of the management of the portfolio including underlying fund ongoing charges and discretionary management charge. Funds can also experience other costs associated with trading the underlying securities which may be disclosed separately on valuations. These are estimates however and no additional fee is earned in association with these charges. The source of this data is FactSet.

Key risks

It is the responsibility of the adviser to select the correct model appropriate for the client's time horizon and objective. Financial advisers must satisfy themselves that the funds' current asset allocations reflect the risk/return expectations of the funds when mapped. Albemarle's model portfolios are mapped against a selection of third-party risk profiling tools to aid advisers as part of suitability assessments for clients. The methodology and results of third-party risk profiling tools are not undertaken by Albemarle Street Partners.

High Risk

This would be appropriate for an investor who is willing to accept a relatively high risk when investing in the pursuit of greater investment returns. The investor is willing to accept high fluctuations in the value of their portfolio over the long-term.
